BUSINESS REQUIREMENTS DOCUMENT

PROJECT DETAILS

PROJECT NAME		
Internal HR Leave Management System		
PREPARED BY		
Ayesha Mohammed (Project Manager Intern)		
STATUS		
Draft		
DOCUMENT NO.	DATE	VERSION NO.
1	06-10-2026	1

1. EXECUTIVE SUMMARY

The organization currently manages employee leave requests through emails, spreadsheets, and manual processes.

This process creates delays, increases administrative work, and makes it difficult for employees and managers to track leave balances and request status.

The proposed HR Leave Management System will provide a centralized platform for employees, managers, and HR to manage leave requests electronically.

The system aims to improve efficiency, reduce manual work, increase transparency, and provide accurate leave information.

2. PROJECT DESCRIPTION

The project is to develop an internal HR Leave Management System for managing employee leave.

The system will allow employees to:

- Apply for leave.
- Check their leave balance.
- View their previous leave requests.
- Check whether their request is approved or rejected.

Managers will be able to:

- View employee leave requests.
- Approve or reject requests.
- Add comments when needed.

HR will be able to:

- Manage employee leave records.
- Manage leave types and policies.
- Check leave balances.
- Create leave reports.

The system will also send notifications when a leave request is submitted, approved, or rejected.

3. PROJECT SCOPE

The project focuses only on managing employee leave from application to approval and record keeping.

IN-SCOPE ITEMS	OUT-OF-SCOPE ITEMS
Item 1: Employee login	Item 1: Payroll processing
Item 2: Leave balance viewing	Item 2: Recruitment management
Item 3: Leave request submission	Item 3: Performance management
Item 4: Leave approval/rejection	Item 4: Employee attendance tracking

Item 5: Manager dashboard	Item 5: Expense management
Item 6: HR administration	Item 6: External/public access
Item 7: Leave history	
Item 8: Notifications	
Item 9: Leave reports	
Item 9: Basic Employee Information Integration	

4. STAKEHOLDERS

Stakeholder	Role	Interest / Influence
HR Manager	Project Sponsor / Business Owner	High
HR Team	Manage leave policies and records	High
Employees	Submit and track leave	High
Department Managers	Approve employee requests	High
IT Team	Develop and maintain system	Medium/High
Finance/Payroll	May use approved leave information	Medium
Senior Management	Monitor business benefits	Medium

5. CURRENT PROCESS

Currently, an employee submits a leave request by email or through a manual form.

The manager reviews the request and responds.

HR then updates the employee's leave balance manually.

This process can result in:

Employee request → Email → Manager → HR → Spreadsheet update

CURRENT PROBLEMS

- Manual data entry
- Slow approval process
- Limited visibility
- Risk of incorrect leave balances
- Difficult reporting
- No centralized history
- Employees need to contact HR to check balances

6. PROPOSED SOLUTION

The organization will implement a centralized HR Leave Management System.

The proposed process will be:

Employee logs in

↓

Checks leave balance

↓

Submits leave request

↓

Manager receives notification

↓

Manager approves/rejects

↓

Employee receives notification

↓

HR records are automatically updated

This reduces manual work and provides greater visibility.

Expected Benefits

- Faster leave processing.
- Less manual work for HR.
- Better accuracy.

- Easy access to leave information.
- Better visibility for employees and managers.
- Easier reporting for HR.

7. BUSINESS REQUIREMENTS

ID	Business Requirement	Priority
BR-01	Employees shall be able to submit leave requests online.	High
BR-02	Employees shall be able to view their current leave balance.	High
BR-03	Managers shall be able to review and approve or reject leave requests online.	High
BR-04	Employees shall receive a notification when their request is approved or rejected.	High
BR-05	The system shall keep a record of all leave requests and their status.	Medium
BR-06	HR shall be able to generate reports on employee leave usage and balances.	High
BR-07	The system shall automatically update an employee's leave balance after an approved request.	Medium
BR-08	HR shall be able to manage different leave types and leave policies.	High

8. FUNCTIONAL REQUIREMENTS

ID	FUNCTIONAL REQUIREMENT	RELATED BR
FR-01	The system shall provide employees with a "Request Leave" option.	BR-01
FR-02	The system shall allow employees to select a leave type and enter start and end dates.	BR-01
FR-03	The system shall display the employee's available leave balance.	BR-02

FR-04	The system shall send leave requests to the employee's manager for approval.	BR-03
FR-05	The system shall allow managers to approve or reject requests.	BR-03
FR-06	The system shall notify employees about the status of their requests.	BR-04
FR-07	The system shall store leave requests and their approval status.	BR-05
FR-08	The system shall generate leave reports for authorized HR users.	BR-06

9. NON-FUNCTIONAL REQUIREMENTS

ID	REQUIREMENT	TARGET
NFR-01	Performance	The system should load the employee dashboard within 3 seconds under normal usage.
NFR-02	Security	Only authorized users should access employee leave information.
NFR-03	Availability	The system should be available 99.5% of the time during business hours.
NFR-04	Usability	Employees should be able to submit a leave request without HR assistance.
NFR-05	Privacy	Employee leave information should only be visible to authorized users.

10. ASSUMPTIONS

The project assumes that:

- All employees have company login credentials.
- Managers will have access to the system.
- HR will provide the current leave policies.
- Employee information is available digitally.
- The organization will provide the required IT infrastructure.
- Employees will receive basic training before the system launches.

11. CONSTRAINTS

The project has the following limitations:

- The system must be completed within 4 months.
- The project has a fixed budget.
- The project team has limited development resources.
- The system must follow the company data-protection policies.
- The system must integrate with the existing employee database.
- The first version will only support the organization's current leave policies.

12. SUCCESS CRITERIA

The project will be considered successful if:

- At least 90% of employees use the system for leave requests within three months of launch.
- Average leave-request processing time is reduced by 50%.
- Manual HR leave administration is reduced by 60%.
- Employees can view accurate leave balances.
- Managers can approve or reject requests electronically.
- HR can generate leave reports without manually combining spreadsheets.

13. RISKS

Risk	Impact	Likelihood	Mitigation
Employees do not use the new system	High	Medium	Provide training and clear instructions
Integration with existing employee database is delayed	High	Medium	Test integration early
Incorrect leave balances	High	Medium	Perform data validation and testing
System development is delayed	High	Medium	Track progress regularly and manage priorities

Employee information is accessed by unauthorized users	High	Low	Apply access controls and security testing
--	------	-----	--

14. SIGN-OFF			
Name	Role	Approval 	Date
[Name]	HR Manager	☐ Approved	[Date]
[Name]	Project Manager	☐ Approved	[Date]
[Name]	IT Manager	☐ Approved	[Date]
[Name]	Senior Management	☐ Approved	[Date]

Why a Poorly Written BRD Can Cause Project Failure?

A poorly written BRD creates ambiguity.

If requirements are unclear, different stakeholders may interpret the project differently.

For example:

HR thinks:

"We need employees to request leave online."

IT thinks:

"We only need a basic request form."

Management thinks:

"The system should automatically calculate balances and generate reports."

Everyone thinks they're working toward the same goal, but they're actually building different versions of the project.

This can lead to:

Unclear requirements → Misunderstanding → Rework → Delays → Increased cost
→ Stakeholder dissatisfaction → Project failure

Short note

A poorly written BRD can be a major cause of project failure because it creates unclear expectations and misunderstandings between business and technical teams. When requirements are ambiguous or incomplete, teams may build the wrong solution, leading to rework, delays, increased costs, and stakeholder dissatisfaction. A clear BRD creates a shared understanding of what the project needs to achieve and provides a reference point throughout the project.
